## FUNDAMENTAL UNDERGLAZES

These Underglazes may be applied to wet clay, greenware, or ^04 bisque; use for design or solid coverage, firing range from ^06 earthenware to ^6 stoneware clay bodies, but test your results for ^10 high fire. To intensify the color or for use on dinnerware, apply clear glaze.

**\*Due to chrome pigment reformulations, it is recommended to use SW004 Zinc-Free Clear glaze, when firing these underglazes to ^6.**

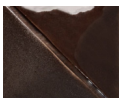

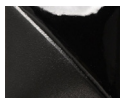

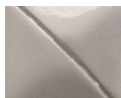

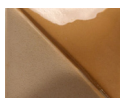

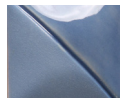

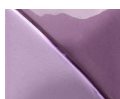

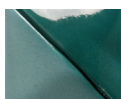

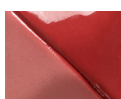

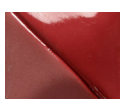

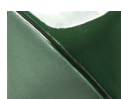

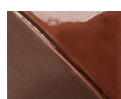

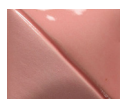

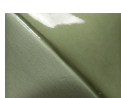

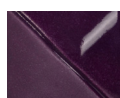

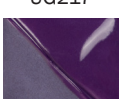

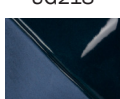

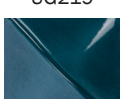

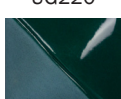

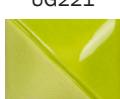

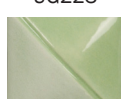

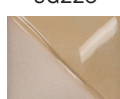

**ONLY when using on wet clay or greenware** - apply and allow to dry. Fire to shelf ^04. You may apply clear glaze and refire to ^06-^05 for earthenware and ^5-^10 for stoneware. Dry greenware can absorb the colors quickly, so apply a water-thinned first coat as a primer.

**For use on bisque** - lightly dampen the ware prior to applying to ^04 bisque. Apply clear glaze if desired and refire according to clay body (check the product labels for ^10 results). Only use either brush or sponge to apply glaze. The colors are intermixable and create unique blends if mixed when wet. Perfect for using on your sgraffito designs! Many of the glazes will hold up well to ^6 firing temperatures.

**Co-fire with Clear:** these glazes can be fired in a single firing. Outgassing will happen, so increase the hold time an additional 15 minutes.

**Heat work is good!** If ^06 does not develop the color you want - go hotter. Mayco recommends ^03-^04 and some artists go even hotter.

Fundamentals will NOT move! They are nontoxic and foodsafe as long as clear glaze has been applied over entire glazed surface.
